North Lake Residents Association Inc.

Submission RE: Roe Highway Extension (Assessment No. 1787)
Public Environmental Review

Proposed Roe Highway Extension Road Reserve through North & Bibra Lake

June 2011 ©
Dear Sir / Madam,

Following are key points that should be considered in assessing the project of the Roe Highway Extension. The North Lake Residents Assoc. are opposed to any form of Roe Highway Extension through North Lake and Bibra Lake, we have researched this issue over the past ten years.

Our website www.savenorthlake.com.au also forms part of this submission as it contains relevant government and community reports, videos, photos and information that support the case for the protection of this environmentally significant and cultural heritage area.

The website acts as a ‘library’ to which reports referenced in this submission can be viewed or downloaded (if required an interactive DVD can be forwarded which contains the same information).

We request that you visit our website before reading this submission. The short introductory video on the home page quickly highlights the history, whilst the video tab www.savenorthlake.com.au/videos.shtml, shows the range of activities and events that have occurred there, including the community and Indigenous opposition to the Roe Highway Extension through North Lake and Bibra Lake.

All reports, videos and photos of the Lakes, can be downloaded as this is a non-funded / not for profit website. If you require hard copies of reports or higher quality videos and photos, we will be happy to provide them.

This submission will show that every government report, when assessing the Roe Highway Extension (Stage 8) through North Lake and Bibra Lake, recommend that the preferable option on natural environmental, ethnological and archaeological grounds is the No Highway Option.
National Heritage Places.

- North Lake and Bibra Lake have been interim listed on the National Estate of the Australian Heritage Commission (AHC) because of their environmental and heritage significance, file number - 5/12/007/0027 (see Attachment 1, p13). Furthermore, the National Trust of Australia W.A. has assessed North Lake and Bibra Lake as an A Class CALM Reserve (see Attachment 1, p3).

- In 1988, the State Planning Commission and Main Roads Department of Western Australia commissioned a report which looked at different Roe Highway options through North Lake and Bibra Lake. The report clearly asserts that this area is of national importance in its comparison with Kings Park and states the following on its conservation values:

  “As a fairly functioning system within the metropolitan area, suitable as a conservation reserve, the study area is without parallel. Kings Park barely fulfills this aspect and many other locations are fragmented, small, isolated and structurally simple.”

  (Sinclair Knight & Partners, LePROVOST Semeniuk & Chalmer, 1988, p29)

Appendix A of this same report, looks at different options for the Roe Hwy, and states:

  “The conclusions to date show the consensus of opinion for the Roe highway extensions in the Roe Swamp-Bibra Lake area are in the following order of preference: (i) Most preferable; no road whatsoever in the area.”

Highlights from the 1988 Sinclair Knight & Partners et al report, which show the environmental and conservational significance of this area and the negative impact that would be caused by the Roe Hwy have been added as attachment 2 to this submission (this is a must read section).

- Aboriginal Cultural Heritage

  1. The area is of great historic and ongoing cultural significance to the Nynoogar community, the EPA states the following:

     “It has also been identified as being the most significant historical site, within the Perth metropolitan region, south of the Swan River”.

     (EPA Bulletin 1088 February 2003, p14 / also see Attachment 1 p6)

  2. There are many registered archaeological sites in North and Bibra Lakes, any alignment of Roe Highway will destroy the following sites: Site number S0192-ID3296 (Roe Swamp) and S01293-ID4107 (Horse paddock swamp) (see Attachment 1, p11)
3. The area of North Lake and Bibra Lake are registered with the W.A. Museum as a mythological site (site number DIA 3709).

In a letter to the EPA (DIA REF: 09/0366, and cc. to Main Roads W.A.) in June 2009, the Department of Indigenous Affairs states the following:

“Based on the information known to the department of Indigenous Affairs one of the sites – mythological, camp and hunting site DIA 3709 North and Bibra Lake, is certain to be impacted by any alignment that passes between Bibra Lake and North Lake”. (see appendix 1).

4. The Metropolitan Nynoogar Council of Elders in 2002 wrote to the EPA and state government opposing any form of alignment of Roe Hwy through North Lake and Bibra Lake. In 2009, Patrick Hume the representative Elder of the area also wrote to Main Roads expressing the same views. (see appendix 2, and www.savenorthlake.com.au/videos.shtml Patrick Hume video)

**Wetlands of International Importance.**

With less than 20% of wetlands left within the Swan Coastal Plain, North Lake and Bibra Lake need to be protected and given international status as it caters for international migratory birds, which are protected under the JAMBA, CAMBA, ROKAMBA International Governments Agreements.

The EPA in its report ‘Environmental values associated with the alignment of Roe Highway (Stage 8), A report by the Environmental Protection Authority under Section 16(j) of the Environmental Protection Act 1986, Bulletin 1088 February 2003’, concludes the importance of the Swan Coastal Plain as follows:

“The EPA places a great importance on the wetlands remaining on the Swan Coastal Plain, considering that 80% are estimated to have been lost. As a result, the EPA expects the remaining wetlands to be managed according to the principles of ecologically sustainable development regardless of land use or activity ....”

(EPA Bulletin 1088 February 2003, p7)

Furthermore, the EPA states the following:

“North Lake and Bibra Lake are both protected under the Environmental Protection (Swan Coastal Plain) Lakes Policy 1992, which prohibits unauthorised filling, excavation, mining, effluent disposal and drainage (Government of Western Australia 1992). The two additional wetland areas located to the east of North Lake and in-between North Lake and Bibra Lake (Horse Paddock Swamp) are also protected under the Environmental Protection (Swan Coastal Plain) Lakes Policy 1992”.

Nationally Threatened Species & Ecological Communities.

Threatened Species

- The Carnaby’s Black Cockatoo is an endangered species and uses North Lake as a feeding area. Many locals and bird watchers have witnessed their activities in North Lake and within the proposed Roe Hwy extension area.

In 2008, the Federal Government’s approval of the Fiona Stanley Hospital in Western Australia was granted with the condition that the North Lake bushland was assigned as the offset under the EPBC Act for the protection of Carnaby’s Black Cockatoo. There is very little bushland left within the Beeliar Regional Park and the metropolitan area, which makes this offset even more important.

(Strategen, Fiona Stanley Hospital Project Carnaby’s Black-Cockatoo Management Plan For EPBC ACT Referral January 2008)

- The following is an extract from the Sinclair Knight & Partners et al (1988) report on the variety of rare fauna that exists in North lake and Bibra Lake including the Roe Hwy reserve:

4.3.2 Results

Conservation Status of the Study Area

Actual records of fauna from the study area shows that it supports 134 species of bird, four native mammals, two introduced mammals, eight amphibians and 20 reptiles. Based on records from similar areas on the Swan Coastal Plain Plain (Curry, 1981; How, 1978) a further six birds, 15 native mammals, three introduced mammals and seven reptiles can be expected.

From high totals such as these it is immediately apparent that the entire study area is, despite some degradation, an important haven for fauna.

It is probably the most important fauna conservation location in the metropolitan area.

Rare and Restricted Fauna

Six species of fauna gazetted as ‘rare or otherwise in need of special protection’ Under the Wildlife Conservation Act (Department of Fisheries and Wildlife, 1983) Have been recorded or are potentially present in the area. An annotated list follows:

Numbat Myrmecobius fasciatus (Provisional)
- Status: Category ‘C’ – species with a drastically reduced range since European settlement. Habitat: Banksia woodland.

Freckled Duck Stictonetta naevose (Recorded)
- Status: Category ‘C’ (as above)
- Habitat: Densely vegetated areas of fresh water.

Peregrini Falcon Falco peregrines (Provisional),
- Status: Category ‘J’ – in need of special protection
Lined Skink Lerista lineata (Recorded)
Status: Category ‘E’ and ‘C’ – species with a very restricted geographic range with has been drastically reduced since European settlement.
Habitat: Banksia woodland and other sand habitats.

Carpet Python Morelle spilota imbricata (Provisional)
Status: Category ‘E’ – species with a very restricted geographic range.
Habitat: Most habitats.

Black-striped Snake Vermicella calanotus (Provisional)
Status: Category ‘E’ (as above)
Habitat: Deep sandy country.

(Sinclair Knight & Partners, LePROVOST Semeniuk & Chalmer, 1988, p21-22)

The report also comments on the impacts that the Roe Hwy will have on the area, a sample of this is as follows:

“The North Lake-Bibra Lake complex consists of two major lakes and several ephemeral wetlands. They operate as a system with birds and other fauna moving around within the reserve to find food and shelter. The Roe Highway will dissect this reserve and thus reduce its value as a wildlife refuge.”

(Sinclair Knight & Partners, LePROVOST Semeniuk & Chalmer, 1988, p27)

The above clearly shows that there are nationally and internationally threatened species in North and Bibra Lake along with the following additional species:

- Carnaby’s Black-Cockatoo Calyptorhynchus latirostris EPBC status – EN
- Baudin’s Black-Cocatoo Calyptorhynchus daudinii EPBC status – VU
- Numbat Myrmecobius fasciatus EPBC status – VU
- Carpet Python Morelle spilota imbricata EPBC status – P4
- Black-striped Snake Neelaps calonotos (Vermicella calanotus) EPBC status – P3
- Lined Skink Lerista lineata EPBC status – P3
- Graceful Sun Moth Synemon gratiosa EPBC status – EN

Flora and Vegetation

North Lake and Bibra Lake are registered as Bush Forever Site (Site 244), the EPA concludes the following:

“Construction of a road within the alignment for Roe Highway Stage 8 would lead to the clearing of remnant native vegetation within Bush Forever Site 244, as well as vegetation to the east and west of this site. The Bush Forever Site 244 is almost coincidental with this portion of the Beeliar Regional Park boundary.

At a broad level, Bush Forever Site 244 contains Bassendean Complex – Central and South, Herdsman Complex and a small portion of Karrakatta Complex – Central and South to the west. Construction within the alignment for Roe Highway within Bush Forever Site 244 would directly impact on Bassendean Complex – Central and South, with the reservation for the alignment covering approximately 15 to 20 hectares of this vegetation complex.
The construction of a highway would also lead to off-site impacts on vegetation located south of the alignment and within the western portion of Bush Forever Site 244, which has been identified as Karrakatta Complex – Central and South.

(EPA Bulletin 1088 February 2003, p10)

In 1984, LeProvost, Semeniuk & Chalmer, Environmental Consultants, reports to Main Roads WA, the following in regards to Roe Swamp:

“The wetlands contain numerous wetland species such as Eucalyphyus rudis, Kunzea ericifolia, varied species of Melaleuca, as well as Agonis linearifolia. Roe Swamp and southeast Bibra are the only examples of this type. Roe Swamp represents the only non-degraded examples of Category E and, as much, should not be compared to other wetlands in this chain without caution.”

**Ecological Communities**

- Roe Swamp is a large, complex sumpland with a wide variety of microenvironments. It is the only sumpland (of 4 in the area) which is intact hydrologically and vegetationally. (see appendix 3 for Roe Hwy impact)

- The area supports a rich diversity of vertebrates which are totally dependent on the ongoing integrity of the wetlands and dry uplands.

- This area has one of the richest, floristically diverse, plant assemblages within the Perth metropolitan area. The plant communities around each of its water bodies differ and as such have a significant synergistic effect on the entire environment.

- North Lake with permanent open water and an extensive series of seasonal wetlands including Roe Swamp draining into it.

- “Roe Swamp is an important wildlife refuge – it is a breeding site for waterbirds and provides a home for a rare skink and a rare frog.”

  (Sinclair Knight & Partners, LePROVOST Semeniuk & Chalmer, 1988, p2)

- The EPA report highlights the ecological values of North Lake and in its conclusion states the following:

  “the EPA concludes that any proposal for the construction of the alignment of Roe Highway Stage 8 through the Beeliar Regional Park would be extremely difficult to be made environmentally acceptable.”

and that:

“the EPA is of the opinion that the overall impacts of construction within the alignment, or any alignment through the Beeliar Regional Park in the vicinity
of North Lake and Bibra Lake, would lead to the ecological values of the area as a whole being diminished in the long-term. Every effort should be made to avoid this.

It is recommended that other alternatives to direct freight through the general area, which do not involve the clearing and filling of the wetlands within the Beeliar Regional Park, be pursued."

(Environmental values associated with the alignment of Roe Highway (Stage 8), p16)

**Migratory Species**

North Lake and Bibra Lake have many recorded international migratory birds that come under the JAMBA, CAMBA and ROKAMBA International Governments Agreements and therefore, they should be protected by the EPA and the EPBC Act:

International migratory birds:

- Cattle Egret *Ardeola ibis* JAMBA, CAMBA
- White Egret *Egretta alba* JAMBA,
- Red-Necked Stint *Calidris ruficollis* JAMBA, CAMBA, ROKAMBA
- Sharp-tailed Sandpiper *Calidris acuminata* JAMBA, CAMBA, ROKAMBA
- Greenshank *Tringa nebularia* JAMBA, CAMBA, ROKAMBA
- Common Sandpiper *Tringa hypoleucos* JAMBA, CAMBA, ROKAMBA
- Black-tailed Godwit *Limosa limosa* JAMBA, CAMBA, ROKAMBA
- Grey Plover *Pluvialis squatarola* JAMBA,
- Long-toed Stint *Calidris subminuta* JAMBA,
- Pectoral Sandpiper *Calidris melanotus* JAMBA,
- Little Greenshank *Tringa stagnatilis* JAMBA,
- Great Egret *Ardea alba* CAMBA
- White-bellied Sea-Eagle *Haliaeetus leucogaster* CAMBA
- Great Egret Egretta alba, *(Ardea alba)* CAMBA
- Glossy Ibis *Plegadis falcinellus* CAMBA
- Curlew Sandpiper *Calidris ferruginea* JAMBA, CAMBA, ROKAMBA

Reference: *North Lake Birds 1980 – 2002* Wynton Maddeford
Wetlands Conservation Society, Norm Godfrey and Jennifer Higbid
Sinclair Knight & Partners, LePROVOST Semeniuk & Chalmer, 1988, p22.

**National migratory birds**

- Rainbow Bee-eater *Merops omatus*,
- White Ibis’
- Straw-necked Ibis
- Yellow-billed Spoonbill
- White-headed Stilt
- Red-necked Avocet *Recurvirostra novaehollandiae*
- Black-fronted Dotterel *Charadrius melanops*
- Grey Teal
- Blue-winged Shoveler
- Pink-eared Duck *Malacorhynchus membranaceus*
- Australian Wood Duck *Chenonetta jubata*
- Mountain Duck
- Great Crested Grebe *Podiceps cristatus*

North Lake Birds 1980 – 2002 Wynton Maddeford

**No Justification for the Roe Highway Extension (Stage 8)**

The previous state Labour government recognized the importance and significance of North Lake and Bibra Lake, it was their policy not to build Roe Hwy Extension in any form.

They consulted the community extensively, and also developed a ‘six point plan’ to address and improve traffic flows without the need for Roe Hwy. Their policy and plans on this issue were based on robust processes including advice from the EPA. *(see appendix 4 to view six point plan, or visit www.dpi.wa.gov.au/frieght/1614.asp)*

Main Roads WA and the Planning Department worked on developing the ‘six point plan’ based on traffic modelling, road improvements and future planning developments. These same departments are now advocating the need for Roe Hwy extension.

Over an eight year period with the previous state government, solutions were found and developed that showed categorically that Roe Hwy Extension is not needed, the question then is, why can’t the current state government implement the same outcomes that would result in the protection of the environment and cultural heritage of North Lake and Bibra Lake?

In 2003, the WAPC *(Western Australian Planning Commission)* conducted an environmental assessment that compared the impact of two road networks options.

Option 1) Roe Hwy through North Lake and Bibra Lake connecting to Fremantle Eastern Bypass (FEB), *(The FEB Bypass MRS has since been deleted).*

Option 2) The revised Stock Road option that did not include the Roe Hwy and Fremantle Eastern Bypass, *(Adopted by the previous state government).*

With option 1 it concluded the following:

“...The vulnerability of groundwater to contamination in this option is also Higher due to the proposed alignment for Roe Highway Stage 8 which extend through an area that has a Very High Vulnerability. This option will also have greater impacts on vegetation complexes, drainage, fauna habitat and Greenway corridors. There are more contaminated sites within the vicinity of this option.

*In comparison, the Revised Stock Road Option has lower environmental impacts across the discussed environmental criteria.*”

Based on the above, it can be argued that there are alternative options available to Main Roads W.A. and the W.A State Government to improve traffic issues such as Leach Highway, (which is a designated truck route) that do not include the construction of the Roe Hwy Extension.

The decision to construct Roe Hwy Extension (Stage 8) in our view is simply a political one rather than a need, since it has been proven by the previous state government that other options are available. The view that this is a political decision is also supported in a letter sent to Mr Patrick Hume, Indigenous Elder of the area on the 13 January 2009, by Main Roads W.A. where there is no mention of the need for Roe Hwy, but rather states the following:

“Main Roads recently commenced preliminary project planning work on the extension of Roe Highway from Kwinana Freeway to Stock Road in response the Liberal Party’s 2008 election commitment to “begin construction of the Roe Highway Stage 8 project over the next four years”.”

(this letter has been submitted as part of EPBC referral reference number 2009/503, by Main Roads)

**Roe Highway Extension (Stage 8) Reports**

Following is a list of government and community reports that have assessed Roe Hwy (stage 8) options through North Lake and Bibra Lake (most are available at [www.savenorthlake.com.au/information.shtml](http://www.savenorthlake.com.au/information.shtml)).

Based on environmental, cultural and social significance, these reports all conclude that the first option should be the “**NO Roe Hwy Option**” and that it should terminate at the Kwinana Freeway.

Following are some examples:

- **2001 Freight Planning Congress Outcomes, Phase 1, November 2001, Minister for Planning and Infrastructure, Perth, Western Australia**

- **15 June 2002 - Freight Network Review, Report on Outcomes of 2nd Congress, Minister for Planning and Infrastructure, Perth, Western Australia.**

• *Aboriginal Heritage and Aboriginal Tourism. Assessment of Roe Highway Options, Prepared for the Department of Planning and Infrastructure by Rory O’Connor, April 2002.*

• *Environmental values associated with the alignment of Roe Highway (Stage 8), A report by the Environmental Protection Authority under Section 16(j) of the Environmental Protection Act 1986, Bulletin 1088 February 2003’*

The following reports which also highlights the importance of North and Bibra Lakes and the Community opposition to Roe Highway Extension can be viewed on the ‘Save North Lake’ website:

1. The Cockburn Wetlands Study March 1976
2. The Australian Heritage Commission & National Trust of Australia (W.A) Assessment North Lake & Bibra Lake, A Class CALM Reserve
3. Western Australia’s Herpetofauna. North Lake Banksia Woodland. A species richness study in Beeliar Regional Park, Perth, W.A.
4. North Lake Management Plan, Environmental Science Murdoch University May 1986
5. Nyoongar Council of Elders – Letters
6. North Lake Archaeological Sites
7. Investigation into Aboriginal Significance
8. Roe Hwy 8 – Aboriginal Multi-Criteria addendum
9. Roe Hwy 8 – Aboriginal Multi-Criteria Options
10. Recollections of North-Bibra Lake
11. North Lake Management Plan
12. Roe Hwy 8 – 2006 Final Report
13. Roe Hwy 8 – Community Survey
14. Roe Hwy 8 – Environmental Nodes Paper
15. Roe Hwy 8 – 2001 NLRA Report
16. Roe Swamp Report
17. The Darling System- System 6
18. EPA Bulletin 266
19. North Lake Rehabilitation
20. EPA Bulletin 1088

**Social Values of North Lake and Bibra Lakes**

The North Lake and Bibra Lake area are important environmental Nodes for the community within the metropolitan area, and have always offered extensive social, recreational and educational benefits and tourist attractions.

The EPA in Bulletin 1088 under the heading Recreation and Education concludes the following:

“The environs surrounding North Lake and Bibra Lake currently support recreational activities which involve cycling, walking, exercising, picnicking and educational pursuits for school and university students (North Lakes Residents Association Inc. 2001). Currently, the Cockburn Wetlands Education Centre is located within the
Beeliar Regional Park and is utilised by a various number of groups such as the Bibra Lake Scouts, the Wetlands Conservation Society, Friends of Ken Hurst Park, Wildlife Conservation Society. In addition, there is also a native animal rehabilitation centre at Bibra Lake. Construction within the alignment for Stage 8 of Roe Highway would detract significantly from the recreational and educational values that the area currently provides.”

**Community Opposition to Roe Highway Extension (Stage 8)**

The community have been opposed to the construction of Roe Highway Extension (Stage 8) for well over thirty years. Over the last six years a total of 9,000 signatures have been submitted to the W.A. State Parliament, with 4,000 of those being submitted early in 2009 opposing the Roe Highway extension.

In 2001, over 1000 people attended a rally held at Bibra Lake in protest against the construction of Roe Hwy stage 8. This sent a clear message that the community was prepared to fight to protect North and Bibra Lake.

In October 2001, the North Lake Residents Assoc. Inc. commissioned a community survey report titled, *Proposed Stage 8 Roe Highway Extension Through The Beeliar Regional Park North Lake and Bibra Lake. Community Survey, 2001*

500 surveys were distributed throughout the community. A total of 399 surveys were returned, this response is very high when considering that the survey consisted of 17 questions. In response to question number 2, “*Should Roe Hwy be constructed beyond the Kwinana Fwy through the Beeliar Wetlands of North & Bibra Lakes?*”, a total of 95% said No, 3% said yes and 2% were undecided.

The questionnaire also asked for written comments, in most cases comments were added to the survey, to view this report go to, [www.savenorthlake.com.au/information.shtml](http://www.savenorthlake.com.au/information.shtml) in Community Reports.

The community are continuing their fight in opposing the Roe Hwy extension. Evidence of this can be gauged by the online signings of a letter to the Premier of Western Australia from the Save North Lake website. To date well over 1500 letters have been sent from not only within Western Australia, but from overseas as well. (evidence of online letters can be provided on request)

In 2003, the Planning & Infrastructure Minister the Hon Alannah MacTiernan, conducted a forum - “Dialogue with the City” where 1100 people participated. Delegates were asked what were the top five aspects to make Perth the most livable city by 2030, and what their aspirations and hopes for the future, at the top of the list were:

“*ENVIRONMENT – Green, clean environment – access for all to open spaces, rivers, forests, beaches.*”
“Environment – protect, enhance, let public enjoy nature, properly manage resources, clean air and water.” “reduce car dependency”.

Dialogue with the City’ also included a random survey of 8000 households. In response to ‘What the People of Perth Think’, 80% of people stated:

“In particular, they wanted environmental protection to be of equal importance to economic growth, for public transport to take the load off private cars.”

It is clear that the wider community across Perth sent a message from Dialogue with the City, that the environment and its protection cannot be compromised.

(Dialogue with the City – Final Report of Proceedings, Department for Planning & Infrastructure, 2003)

**Conclusion**

Roe Highway Extension (Stage 8) was planned more than forty years ago, at a time when the value of the Beeliar Wetlands was not fully understood. It is now recognised that these wetlands have the following important values:

- Outstanding biodiversity
- Habitat for wildlife
- International migratory birds
- Endangered priority species, flora and fauna
- Aboriginal cultural and spiritual sites
- Important recreational areas.

The City of Cockburn and the City of Fremantle have formally adopted the position that the Roe Highway Extension is not appropriate and have opposed it. The Environmental Protection Authority has stated that no route through the Beeliar Wetlands is likely to be environmentally acceptable. The environmental damage that would result from any attempt to build the Roe Highway between North and Bibra Lakes would far outweigh any benefit the Highway might bring.

As a result of the Freight Network Reviews held by the previous state government between 2001 and 2004, alternative transport routes and solutions have been identified without the need for the Roe Highway extension.

The strong body of evidence presented and summarised in this submission have been consistent in its findings that this Highway should not be built. The arguments against the construction of Roe Highway Extension have been supported by numerous studies and subsequent government reviews and technical reports.

This entire process has withstood public and government scrutiny and proven to be robust.
In 2001, Australian State of the Environment report highlights how fragile the Australian environment is, and that if we continue with “business as usual”, more and more species will be threatened and lost. It states:

“As species are lost and habitats fragmented, degraded or destroyed, we lose our heritage and part of our life-support system.” (SoE p2)

It goes on to say that:

“This decade is the time for change, to implement the principles and objectives of ESD” - ecologically sustainable development - (SoE p4)

It is therefore timely and appropriate that North Lake-Bibra Lake and its surrounding bushlands be protected for future generations, and that the proposal for the construction of Roe Highway Extension be rejected by the Environmental Protection Authority.

Appendix 2

Mr Mark Hazebroek
Project Director
Main Roads
Western Australia

Dear Mr. Hazebroek,

Roe Highway extension – Kwinana Freeway to Stock Road Aboriginal Heritage.

I refer to your letter dated 13 January 2009 in regards to the Aboriginal heritage and the impact that the Roe Hwy Stage 8 will have on North and Bibra Lake and surrounding bushland, the building of this highway is inconsistent with Aboriginal tradition.

The area of North and Bibra Lake is a place or area of particular significance to Nyungar people in accordance with their traditions. There are many registered sites in this area and the elders and indigenous community are opposed to any construction of Roe Hwy Stage 8, be it under, over, through or around the area of North and Bibra Lake.

The impact of Roe Hwy Stage 8 would adversely affect the significance of the area in accordance with Nyungar traditions, please visit the following link and click on the Patrick Hume video button. http://www.savenorthlake.com.au/videos.shtml

I am the elder of the area and have been in touch with other local elders, we have also been in touch with Daniel Garlett who is the Regional Development Manager from the South West Aboriginal Land & Sea Council, he will also be assisting myself and the local community on this issue.

As the representative elder for this area I would like to be consulted at every stage of the Roe Hwy Stage 8 (extension) process, our community will soon be meeting and we will contact you to discuss the outcomes.

Please forward any correspondence to my nominated address:

6 Point Plan

The 6 Point Plan (also known as the 6 Step Plan or 6 Step Solution) outlines the major, high priority initiatives of the Metro Freight Network Strategy.

The following list briefly describes each of the Plan’s 6 points, and provides tips to engage with more detail and the current status of the projects being undertaken.

1. Expand the Kwinana Freeway
   This initiative aims to expand the Freeway from South Street and Leach Highway, while catering for increasing levels of traffic heading to the growing industrial areas of Cockburn and Kwinana.

2. Port more freight on rail
   Improving rail connections between Kwinana, Kwinana and Fremantle will help move industry transport freight by rail instead of by road.

3. Build inland container terminals
   A container terminal in Kwinana will enhance the quality and diversity of freight services and reduce transport costs.

4. Make better use of our roads
   Currently, many goods trucks heading to Fremantle Port are empty. Better scheduling, harmonising and a truck booking system at the port will ensure that the number of trucks entering or leaving the port is kept to a minimum.

5. Plan now for the Outer Harbour at Kwinana
   A new port will take much of the growth in traffic from Fremantle Port.

6. Improve existing roads
   Upgrades to Leach Highway, Stock Road and High Street will improve efficiency and reduce the impact of traffic on local residents.

In addition to the 6 Point Plan, other initiatives being considered for project evaluation and implementation are also being undertaken. For more information on these go to other initiatives.

6 Point Plan project list

- Expand the Kwinana Freeway
- Port more freight on rail
- Build inland container terminals
- Make better use of our roads
- Plan now for the Outer Harbour at Kwinana
- Improve existing roads

Further details on these initiatives and their current status can be found on the Department's website.
